Education

Western University

Sep 2025 – Now

- Master of Science in Computer Science
- GPA: 92.5/100

Shandong University

Sep 2021 – Jun 2025

- Bachelor of Engineering in Data Science and Big Data Technology
- GPA: 91/100 (Top 10%)

Research Interests

- AI Misalignment, Dark Patterns, Technology Impacts on Human Behaviour

Research Experience

Research Assistant, Influence of AI in Healthcare Decision-Making

May 2026 – Now

- Collaborating with the University Health Network to evaluate the safety of AI recommendations for transplant candidacy
- Designing human studies to measure the quality of physician-AI collaboration

MSc Research, Discovering LLM Behaviours to Misinformation in Multi-Turn Conversations

Jan 2026 – Now

- Evaluating how frontier LLMs respond to user-provided misinformation during long conversations
- Proposed an interactive framework in which a simulated user engages in conversation to stress-test the target model with persistent misinformation advocacy
- Identified distinct model behavioural patterns and found that models are most vulnerable to users who leverage emotional appeals to advocate for a false belief

MSc Research, Impact of AI Chatbots on Human Beliefs

Sep 2025 – Now

- Investigating whether LLMs contribute to a new form of filter bubbles by reinforcing users' existing beliefs
- Hypothesized that LLMs can prompt belief revision by evaluating the user's reasoning process, motivated by the argumentative theory of reasoning
- Designed an online experiment to compare the belief change effects of participants among different prompting strategies

Main Collaborator, Misalignment of Synthetic and Human Respondents

Feb 2026 – Aug 2026

- Compared the LLM-generated and human-answered responses in the Big Five personality test to understand why LLMs cannot substitute for human participants.
- Analyzed through a 5-level audit: mean, distribution, reliability, personality traits correlation and behaviour comparison

Undergraduate Research, LLM-based Psychological Scale Adaptation

Mar 2024 – Mar 2025

- Developed a method using LLMs to generate psychological test items tailored to diverse respondent populations adapted from existing scales
- The generated items are well aligned with psychological constructs, adapted to potential respondents, improved language diversity and show good reliability and structural validity under human evaluation
- Implemented a web-based tool for the use of this adaptation method

Publication

Yuchen Han, **Wenqing Zhang**, and Yuqing Sun. 2026. "From Design to Induction: A New Paradigm for Respondent-Centric Psychological Scale Generation." ICASSP 2026-2026 IEEE International Conference on Acoustics, Speech and Signal Processing (ICASSP). IEEE, 2026.

Activities

Trainee at Communicating Science Conference , ComSciCon Canada	Jun 2026
Poster Presentation , 2026 IEEE International Conference on Acoustics, Speech, and Signal Processing	May 2026

Membership

Vice President , The Human Factors and Ergonomics Society Student Chapter	May 2026 - Now
Student Member , Rotman Institute of Philosophy	Apr 2026 – Now
• Contributed to interdisciplinary research collaboration and knowledge translation	

Honors and Awards

Best Presentation , Western University Computer Science Departmental Conference	Apr 2026
Silver Medal , 92nd/3856 Kaggle Competition on Credit Risk Prediction	May 2024
Second-Class Scholarship , Top 15%	2022 - 2023, 2023 - 2024
First-Class Scholarship , Top 5%	2021 - 2022
