Education

Western University

Sept 2025 – Now

- Master of science in Computer Science

Shandong University

Sept 2021 – June 2025

- Bachelor of engineering in Data Science and Big Data Technology
- GPA: 91/100 (Top 10%)

Research Experience

LLM Robustness to Misinformation in Multi-Turn Dialogue

Jan 2026 – Now

- Designed an evaluation framework to measure how robust large language models remain to misinformation during multi-turn interactions
- Built a simulation pipeline where adversarial user agents attempt to persuade LLMs to agree with biased statements, conspiracy beliefs, and fake news
- Conducting large-scale experiments comparing frontier LLMs under different adversarial interaction strategies

Belief Formation and Latent Persuasion Through Human-LLM Interaction

Sep 2025 – Now

- Conducting an empirical study examining whether LLMs function as a new form of filter bubble by selectively filtering information and reinforcing users' existing beliefs
- Designed experiments to compare the belief revision effects of different reasoning styles, prompting strategies, and frontier LLMs
- Developed an online experimental platform in which participants engage in argumentative dialogues with an LLM on controversial topics

LLM-based Psychological Assessment Framework

Mar 2024 – May 2025

- Developed a prompting-based framework using large language models (LLMs) to generate psychological scale items tailored to diverse target populations and scenarios, reducing the need for extensive expert involvement
- Designed a novel evaluation framework and led all experiments, validating the performance
- Implemented an interface to simplify user interaction with the framework
- Paper accepted at ICASSP 2026

Honors and Awards

First-Class Scholarship

2021 - 2022

Second-Class Scholarship

2022 - 2023

Second-Class Scholarship

2023 - 2024

Home Credit - Credit Risk Model Stability, Silver Medal, Kaggle Competition

Feb 2024 - May 2024

- Employed machine learning models to assess credit risk by predicting loan default probabilities
- Led data processing and feature engineering, training a ensemble model comprising LightGBM, XGBoost, CatBoost, and a fully connected neural network
- Achieved 92nd place out of 3,856 competing teams, demonstrating proficiency in applying advanced data analysis techniques to real-world challenges

Technical Skills

Data Analysis: NumPy, Pandas, Polars, Matplotlib, Seaborn

Machine Learning: LightGBM, XGBoost, CatBoost, scikit-learn, PyTorch, Transformers

Artificial Intelligence: Transformers, Prompt Engineering, API Integration, RAG

Programming & Development: Python, C/C++ , Java, JavaScript, SQL, SpringBoot, Node, Vue

Database: MySQL, Oracle, MongoDB
